1. What is and what does CT Scan do

CT (Computed Tomography) is a diagnostic technique that uses ionizing radiation and provides, compared to traditional X-ray imaging, better morphological detail of all anatomical structures. Because this is an examination that exposes you to ionizing radiation, it should be avoided in the absence of specific clinical indication. Women of childbearing age must exclude current pregnancy due to possible risk of damage to the fetus.

2. Indications and procedure

It is an in-depth diagnostic investigation that, based on clinical indication, allows the study of traumatological, oncological, inflammatory problems and, more generally, emergency situations of all body districts. The patient is positioned on a table that moves inside a circular apparatus (gantry) inside which there is an X-ray source and detection devices. The data obtained are processed by a computer that transforms them into images of the examined area. At the discretion of the Radiologist, it may be necessary to administer a contrast medium intravenously which improves the diagnostic power of the method.

3. Contrast medium

Compromised renal function is the main limitation to the use of iodinated contrast medium. For this reason, a recent creatinine value may be requested to certify that renal function is not compromised. Iodinated contrast media are extremely safe products, but can occasionally cause minor reactions (hot flushes, sneezing, nausea, vomiting, localized rash), moderate to severe reactions (diffuse rash, respiratory difficulty, irregular heartbeat, loss of consciousness, anaphylactic shock, glottic edema), or delayed reactions (within one week, generally mild skin reactions). Medical staff are trained to treat these reactions.

4. Informed consent declaration

The undersigned, informed about the type of diagnostic examination to be performed (Computed Tomography), made aware of the relative risks and of the clarifications that have been provided to me:

Choice	Mark
I CONSENT to CT SCAN WITHOUT contrast medium	☐
I CONSENT to CT SCAN WITH iodinated contrast medium	☐
I DO NOT CONSENT to CT SCAN examination	☐
